

Stop Writing Tests From Scratch

Start capturing real workflows and turn them into automation instantly

Test automation doesn't fail because of tools.
It fails because capturing real workflows is slow and technical.

So engineers translate processes.
But the people who know them best aren't involved.

What if your best test cases weren't just captured, but already written?

Cycle Chrome Recorder (CCR)

Record business processes directly in Chrome and convert them into automation-ready scripts.
No translation. No guesswork. Just executable workflows.

CAPTURE

Record real workflows
as they happen

No manual scripting
from scratch

ACCELERATE

Give engineers a
working foundation

Build and refine instead
of recreate

SCALE

Expand automation
beyond QA

Business users
contribute directly

How It Changes the Game

Turn SMEs Into Contributors

A warehouse manager records fulfillment

QA turns it into automation the same day

Automate Test Data Creation

Record UI-based data setup

Reuse it as a repeatable data engine

Adapt To Change Instantly

Pause a test

Record the variation

Extend coverage without rework

Why It Matters

Faster test creation

Less dependency on engineering

More automation coverage

Better alignment between teams

Your team already runs the workflows that matter. Now they can capture them. See how fast you can go from workflow to test case. Request a demo today.
